

## ***TRUE BALLISTIC***

### ***"The Chronograph that just works"***

Imagine a chronograph optimized for both firearms and airguns that always works and that gave the actual ballistic coefficient of a round through multiple velocity readings. All in a compact portable package. No external triggers, microphones, tripods or external power needed, just a fool proof set up with all the information you will ever need for an accurate and true ballistic calculation.

### ***" UP TO 4500FPS "***

The True Ballistic Radar Chronograph measures actual speeds at four different velocities readings from 0 - 300 yds to determine actual ballistic coefficient using G1/G7/RA4 drag models. This provides actual data in your conditions, info that provides the difference between a hit and a miss. What's it worth to you to hit your target? Use the on board display or connect to the FX Radar app to get more out of the ballistic data.
